FOR IMMEDIATE RELEASE**Arbortech releases Airboard Series II**

Perth, Western Australia September 15th 2007: **After an extensive development program, Arbortech is proud to unveil Airboard Series II. The new Airboard is vastly improved in all areas and features new operating controls, a new rotationally moulded shell and a revised chassis.**

The original Airboard made its debut to a world wide audience at the Sydney 2000 Olympic Games opening ceremony. With the new improved Airboard Series II, this exciting hovercraft technology is now available to thrill seekers world wide and the first shipments to distributors and customers, including high profile customers such as Disneyland, have already left the new Airboard factory.

The Airboard Series II features an award-winning rotationally moulded shell and a new chassis design, which offers significantly improved durability compared to the previous fibreglass model. This heavy duty design makes the Airboard perfectly suitable for use in entertainment parks and go-kart centres.

Airboard Series II is now even easier to fly; Arbortech has developed new operating controls with one lever for acceleration and one lever for braking. Even beginners will immediately enjoy the excitement of riding on a cushion of air that gives you the freedom and exhilaration of flight. This new control system will be particularly beneficial for ride centres, as it dramatically decreases the time spent teaching customers how to fly the Airboard.

The Airboards are manufactured in a new manufacturing facility in Western Australia and Airboard customers will benefit from streamlined production, improved quality control and significantly improved lead-time on orders.

All new designs and features of the Airboard Series Two have been patented and protected.

ABOUT ARBORTECH

Arbortech is an Australian company engaged in the research, development and manufacturing of innovative technologies. **Arbortech** was incorporated in 1988 with the release of the Woodcarver™ Blade, a revolutionary product that allows the user to powerfully shape wood using free-hand techniques. Primarily known for its cutting technologies as featured in the Award-winning AS160, **Arbortech** also gained international recognition for its development of the Airboard™, a unique personal hovercraft that featured in the Sydney 2000 Olympics Opening Ceremony.

Since its first product release, **Arbortech** has positioned itself in international markets as a progressive company delivering unique woodworking and masonry cutting power tools. Arbortech has gained an international reputation for an innovative approach, engineering excellence and cutting-edge technologies in already well-established industries.
